Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wynings

US 2003/0068201 A1 in view of Schennach # 6,382,383 B1 discloses a hydraulically driven, split drum vibration roller (10) wherein each drum is capable of moving forward or reverse in unison or independently. What Wynings does not disclose is the use of a deadman safety switch.

However, Schennach discloses a safety switch for soil compaction rollers for preventing an operator from being caught between the roller and an obstacle when moving backward. The switch comprising an operation cable having an outer tube (9), connected to a travel lever (3). Wherein the back end of the outer tube is locked in front of the travel lever while the safety switch is not activated, and is releasable to extend to a direction of the travel lever when the switch is activated. Therefore, it would have been obvious to one of ordinary skill in the art, at the time the invention was made to provide the vibration roller of Wynings with a deadman switch, as taught by Schennach, in order to protect the user's feet and legs when the roller is moving in reverse.

See Wynings Figs. 1-4; paragraphs [0005-0025].

With respect to claims 2-5 Schennach discloses the use of turning plates (7) and cams (8) that are functional in the operation of the deadman switch taught. Therefore, it would have been obvious to one of ordinary skill in the art, at the time the invention was made to provide the vibration roller of Wynings with a deadman switch, as taught by Schennach, in order to protect the user's feet and legs when the roller is moving in reverse. See Wynings Figs. 1-4; paragraphs [0005-0025].
